NETWORK SECURITY

SECURITY PACKS

Unified Threat Management solutions & Next-Generation Firewalls

As protection needs can vary from company to company, Stormshield has designed simple, attractive security service packages for specific uses.

These packages guarantee permanent updating of protection systems considered essential to your business. They also include hardware maintenance, corrective and evolutionary software updates, and access to technical support via our partner network.

ESSENTIAL SECURITY PACK

Companies looking for network protection against threats to their infrastructure and remote users can subscribe to this package. With network segmentation, secure communications, SD-WAN, intrusion prevention and Zero Trust Network Access (ZTNA), they are assured of an essential level of security.

PREMIUM SECURITY PACK

This package is designed for companies requiring a high level of security. It provides the best technologies to counter the most advanced attacks. The advanced antimalware system with emulation technology, AI-powered sandboxing (BreachFighter) and URL filtering in Cloud mode (Extended Web Control), guarantee the level of protection expected by security-conscious organizations.

Hardware exchange

All security packs include hardware maintenance in order to ensure business continuity in the event of a hardware failure. Your appliance will simply be exchanged for a similar replacement product. Three levels of service are available.

- Standard exchange
Your appliance will be exchanged once our customer service center receives the defective appliance.
- Express exchange
Your appliance will be exchanged in advance. As soon as our support centers diagnose a hardware failure, the replacement product will be sent, which you would receive the next working day¹.
- Serenity4all
With this service, you replace the product yourself once our support centers have diagnosed the malfunction fault².

Tailored services

Individual security services may be subscribed in order to complete an Essential pack. You will then be able to upgrade your security solution and adapt it closely to your specific requirements.

These options (Antimalware, Breach Fighter, URLs filtering Extended Web Control) are all based on the best solutions recognized on the market.

.....

¹ Please check with us regarding the eligible countries and cities. Applies to diagnoses made before 1 p.m.

² Replacement products must be acquired in advance for this service.
